

CHOOSING THE RIGHT HORIZONTAL GRINDER FOR YOUR OPERATION

The fundamental differences between the Vermeer horizontal grinder models are size, horsepower, onsite maneuverability and power source.

When searching for a horizontal grinder, here are a few things to consider that can help narrow your search.

	HG4000	HG4000E	HG6000	HG6000E	HG6000TX	HG6800TX
						
Grinder will primarily operate at a single location.	●	●	●	●		
Grinder will frequently be moved from site to site.	●		●		●	●
Grinder will be repositioned onsite throughout the day.					●	●
There are access limitations (narrow roads, weight restrictions, etc.) that may limit transporting a grinder.	●					●*
Daily throughput production is your highest priority.			●	●	●	●
You are a smaller-volume producer of mulch or compost.	●		●			
Grinder will not be operated daily, but you need to maximize throughput on the days it's used.			●	●	●	●
You are a tree care professional or a landscaping supply business wanting to convert organic waste into mulch.	●					
You have a focus on environmental impacts.		●		●
