

# EQUIPMENT SOLUTIONS FOR EVERY PHASE OF THE JOB

For renewable energy, utility and underground infrastructure installation work — Vermeer® equipment can help get the job done efficiently.

## SITE PREP

First on the job, Vermeer offers a complete line of land-clearing and wood-processing equipment to remove trees and brush. Horizontal grinders can efficiently process large organic material and Vermeer whole tree chippers are good solutions for tackling smaller and lighter brushy material.

## VACUUM EXCAVATION

Whether you're doing open-cut work or horizontal directional drilling, Vermeer vacuum excavators can help you safely daylight all existing utilities along the way, as well as help with drilling fluid management on horizontal directional drilling sites.

VACUUM EXCAVATOR

## OPEN-CUT EXCAVATION

When laying down miles of utilities or pipeline, especially in challenging ground conditions, you're going to want to employ a trencher. The Vermeer line of trenchers excels in these conditions, leaving you with a clean on-grade ditch and straight trench sidewalls.

PIPELINE TRENCHER

## TRENCHLESS TECHNOLOGY

When utilities or pipelines need to be installed in sensitive ground conditions (under lakes, rivers, protected forests or wetlands), or there are above-ground obstacles (roads or buildings), it's time to go trenchless. Vermeer has you covered with horizontal directional drills, high-pressure mud pumps and reclaimers to get the job done.
